Oculus Quest

## Hygiene Info-Card

It's important to clean your Oculus Quest headset after every use to ensure the headset remains in good working condition. Personal hygiene plays a big role in keeping the Oculus Quest headset clean. Do not use the Quest headset after activities that would immediately transfer perspiration and other bacteria to the headset when placing it on your head.

### To clean your Oculus Quest headset

Use a dry cloth to clean the outside of your headset paying close attention to ensure all perspiration has been removed. Use non-abrasive, antibacterial wipes to clean various surfaces including the straps and the facial interface foam. Don't use an abrasive cleaning solution as this may damage the equipment.

### To clean your Quest headset lenses

Use a dry optical lens micro-fiber cloth to clean your headset lenses being sure to remove all perspiration. Starting from the center of the lens, gently wipe the lens in a circular motion moving outwards.

### To clean your Quest controller

Use a dry cloth to first wipe down the entire controller paying close attention to remove all perspiration from all surfaces of the controller. Once dry, use non-abrasive antibacterial wipes to further clean the surfaces of your remote. Don't use an abrasive cleaning solution as this may damage the equipment.

### Additional hygiene measures

To avoid direct main contact with you, use a VR-hygiene-mask. This should only be used once. In addition, you should also use a silicone protective mask directly on the Oculus Quest. This can be cleaned with non-abrasive antibacterial wipes. Recommended to use both when you sweat with the silicone mask.
